

Quarterly Economic Summary

San Juan County

Released: December 2020

Chart 1. Matched Taxable Gross Receipts Per Quarter

The three months making up FY21 Q1 were the worst three months of the state's economic impact from COVID-19, comparing gross receipts data with the same period a year ago, despite 14 counties experiencing a year-over-year increase. The impacts were significantly worse due to lapsing federal support and no new federal aid package. Importantly, the federal bonus for unemployment benefits of an additional \$600/week expired, reducing consumer spending power.

San Juan County has seen a steady decline in its matched taxable gross receipts (MTGR) over the last four quarters, shown in Chart 1. From Q4 FY20 to Q1 FY21, San Juan County's MTGR declined by \$25M or 4%. Chart 2 shows that the retail trade sector made up 34% of the total MTGR collected by San Juan County during Q1 FY21. From Q4 FY20 to Q1 FY21, retail trade increased by \$9.3M, or 5%. Table 1, on the next page, shows a decrease of \$154M from Q1 in FY20 to FY21 of the same period in total MGTR.

Chart 2. FY21 - Q1 Industry Size by Matched Taxable Gross Receipts

Matched Taxable Gross Receipts (MTGR) is the best tax data available to show underlying economic activity. It matches a tax payment with reported receipts for each taxpayer, by industry.

Table 1 also shows the mining, quarrying, and oil and gas extraction industry declining by \$43M, or 74%, when comparing Q1 FY20 to Q1 FY21. Only three industries experienced year over year growth when comparing the two time periods, indicating a widespread decline in San Juan County revenue which is most likely tied to losses in the oil and gas sector.

Gross receipts tax (GRT) revenue collections declined in Q1 FY21, shown in Chart 4. From Q4 FY20 to Q1 FY21, quarterly collections declined by roughly \$73K, or 1%.

HB6, passed in 2019, made widespread tax changes within New Mexico. One notable change is the conversion to destination-based sourcing that will begin after a two-year delay. During the 2020 Special Session, that legislation was amended, increasing a temporary distribution to municipalities and counties. Now municipalities will receive a distribution that is a portion of \$2.5 million while counties will receive a distribution that is a portion of \$1.5 million. The amounts distributed will be proportional to the size of that community's population versus that of the entire group. These amounts are subject to change if the federal government provides municipalities and counties future grants to offset revenue declines attributable to COVID-19.

Chart 6. Quarterly Initial Unemployment Claims

Chart. 7 Initial UI Claims - Weekly

A significant unexplained increase in initial unemployment claims can be an early indicator of an economic downturn. Explained increases commonly include seasonal job fluctuations, federal government shutdowns resulting in employee furloughs, or the closing of a major regional facility. This unprecedented uptick in initial unemployment claims is tied directly to the COVID-19 pandemic and subsequent furloughs and layoffs by affected businesses. As we continue into early and mid-2021, it is likely the number of initial unemployment claims will vary based on the effects of the pandemic but gradually wane; however, it is impossible to predict how quickly the employment numbers will return to pre-COVID-19 levels.

Chart 7 – Includes weekly initial claims for regular unemployment insurance (UI) but excludes pandemic unemployment assistance (PUA) and pandemic emergency unemployment assistance (PEUA) claims. Weeks shown as zero were redacted for confidentiality.

Chart 8 – Includes claimants receiving payment and pending certifications for standard UI, PUA, PEUA, extended benefits, and trade readjustment allowances. As of 11/2/2020, claimants who were initially considered eligible but have either never filed a certification or have not certified within 14 days have been removed from data, resulting in lower numbers.
