

Quarterly Economic Summary

Los Alamos County

Released: February 2020

Prepared by: Joel Salas, Economist, and Ryan Eustice, Economist

Chart 1. Matched Taxable Gross Receipts Per Quarter

Los Alamos County saw a large decrease in its matched taxable gross receipts (MTGR) from Q1 to Q2 of FY20, as seen in Chart 1. Los Alamos County's MTGR has historically hit a seasonal peak in the first quarter of the fiscal year and the lowest point during the second quarter. The large decrease in Q2 FY20 is not unusual. Table 1, on the next page, shows an exceptionally large year over year increase of \$125.3M from Q2 FY19 to Q2 FY20 for the Administrative/Support & Waste Management/Remediation industry. This large increase

may be explained by a reclassification by one or multiple entities from the Professional, Scientific and Technical Services industry, which saw an exceptionally large decrease for the same period. The county saw a 4% increase in MTGR in Q2 FY20 over Q2 of FY19.

Chart 2. FY20 - Q2 Industry Size by Matched Taxable Gross Receipts

Matched Taxable Gross Receipts (MTGR) is the best tax data available to show underlying economic activity. It matches a tax payment with reported receipts for each taxpayer, by industry.

Gross Receipts Tax (GRT) revenue collections saw a decline in the second quarter of FY20, as seen in Chart 4. This decrease is not unusual due to the seasonality of the county. Q2 FY20 saw a 4% year over year increase over Q2 FY19. Table 2, on page 3, shows multiple industries having no contribution to GDP in 2018. This is due to the number of companies within the industries being so low that the Bureau of Economic Analysis has withheld the information for the industry to avoid disclosure of confidential information. Table 2 does not necessarily reflect the proportion each industry contributes to overall GDP.

HB6, passed in 2019, made widespread tax changes within New Mexico. One notable change is the conversion to destination-based sourcing that will begin after a two year delay. During this delay, local governments will receive a distribution that is a portion of \$2M each month. The portion distributed will be based on what the population of each county is to the total population of all counties, as per the most recent decennial census.

Chart 6. Quarterly Initial Unemployment Claims

Chart 7. Calendar Year % Change In Real GDP Year Over Year

A significant unexplained increase in **Initial Unemployment Claims** can be an early indicator of an incoming economic downturn. Explained increases commonly include seasonal job fluctuations, government shutdowns resulting in mass employee furloughs and the closing of a major regional facility. The major uptick in the initial unemployment claims is directly tied to the COVID-19 outbreak and the subsequent closure of “non-essential” businesses. These businesses tend to be a major component of the workforce. As the stay at home order stays in effect, it is likely that the initial unemployment claims will continue to increase as the economy shifts to handle the unprecedented changes.
